

BLACK LORETO

GOOD DISEASE PACKAGE
High Yielding and Direct Harvestable

- Excellent upright architecture suitable for direct harvest.
- Matures 96-100 days or about the same as Domino**
- Approximate seed count is 2,211 sds./lb.***
- Loreto has the "I" gene for bean common mosaic virus, is resistant to Anthracnose (race 7), (race 65), and (race 73) and has the UR3 gene for resistance to the most prevalent strains of rust.

Loreto is a broadly adapted black bean variety ideally suited to Michigan and Ontario production regions. A consistent performer throughout the trialing process and in commercial production, its upright architecture and excellent yield potential make it an excellent choice for Michigan and Ontario growers.

Assuming an 70 lbs./AC yield increase over Domino, profit would increase \$21/AC on \$30/cwt. beans. This would amount to \$2,100 increased profit over Domino on 100 acres of production.
